## CLAIM AMENDMENTS

## 1. (Currently Amended)

A toner for electrostatic latent image development comprising a coloring agent and a resin, wherein the toner is a yellow toner formed by a polymerization method and the yellow toner includes o-anisidine in an amount of 50 ppm or less, and the yellow toner has a volume average particle size of 3 to 8  $\mu$ m, the coloring agent is C.I. pigment yellow 74.

### 2. (Original)

The toner of claim 1, which is formed by polymerization of a radical-polymerizable monomer in aqueous vehicle.

## (Previously Presented)

The toner of claim 2, wherein the amount of o-anisidine is 30 ppm or less.

### 4. (Original)

The toner of claim 1, which is formed by fusing resin particles formed from radical-polymerizable monomer and particles of a coloring material in aqueous vehicle.

## (Previously Presented)

The toner of claim 4, wherein the amount of o-anisidine is  $30\ \mathrm{ppm}$  or less.

### 6. (Cancelled)

# 7. (Original)

The toner of claim 1, wherein the resin comprises both a high molecular weight component having a peak or a shoulder at the range of 100,000 to 1,000,000 and a low molecular weight component having a peak or a shoulder at the range of 1,000 to less than 20,000.

## 8. (Original)

The toner of claim 1, wherein the resin has a glass transition point of 20 to 90  $^{\circ}\text{C}$  and a softening point of 80 to 220  $^{\circ}\text{C}$  .

## 9. (Previously Presented)

The toner of claim 1, wherein the amount of o-anisidine is  $30\ \mathrm{ppm}$  or less.

## 10. (Previously Presented)

The toner of claim 1, wherein the amount of o-anisidine is 10 ppm or less.

## 11. (Currently Amended)

A toner for electrostatic latent image development comprising a coloring agent and a resin, wherein the toner is a yellow toner formed by polymerization of radical-polymerizable monomer in aqueous vehicle and a content of o-anisidine contained in the yellow toner is 50 ppm or less, the coloring agent is C.I. pigment yellow 74

#### 12. (Withdrawn)

An image forming method comprising:

developing an electrostatic latent image formed on an image bearing member by the toner of claim 1;

transferring a toner image formed on the image bearing member onto a recording material; and

fixing the transferred toner image.

## 13. (Withdrawn)

The method of claim 12, wherein the fixing comprises transmitting the recording material between a heating member and a pressing member.

## 14. (Withdrawn)

The method of claim 13, wherein the heating member or the pressing member is a roller.

## 15. (Withdrawn)

The method of claim 14, wherein the heating member is the roller which comprises a support and a fluorine containing layer formed on the support.

## 16. (Withdrawn)

The method of claim 12, wherein the toner is formed by polymerization of a radical-polymerizable monomer in aqueous vehicle.

#### 17. (Withdrawn)

The method of claim 16, wherein the content of the aromatic amine is  $30\ \mathrm{ppm}$  or less.

## 18. (Withdrawn)

The method of claim 12, wherein the toner is formed by fusing resin particles formed from radical-polymerizable monomer and particles of a coloring material in aqueous vehicle.

### 19. (Withdrawn)

The method of claim 18, wherein the content of the aromatic amine is  $30\ \mathrm{ppm}$  or less.

## 20. (Withdrawn)

The method of claim 19, the aromatic amine component is a compound represented by the following formula,

wherein R is a hydrogen atom, a chlorine atom, a bromine atom, a nitro group, an alkyl group with 1 to 6 and 8 carbons, an alkoxy group with 1 to 6 and 8 carbons, or -NHCOR' where R' is an alkyl group with 1 to 6 and 8 carbons.

#### 21. (Cancelled)

## 22. (Cancelled)
